# REV

AT PROSCENIUM

The **REV** at Proscenium, is a premier, one of a kind condominium community opening in fall of 2020. This all encompassing luxury development combines the ease of upscale living with the convenience of retail shops, dining, and outdoor amenities all within mere steps of your front door.

**REV** at Proscenium  
1215 S. Rangeline Rd.  
Carmel, IN 46032

Each **REV** Smart home will have the following base system package  
powered by Control4 and installed by Millennium Sounds

**Control4 "Smart Hub"**

The **REV** smart home base system utilizes the Control4 Smart Hub to control your living environment and allows you to expand and upgrade your technology package. This little device, housed in your Master closet, is the brains behind all your technology. It communicates automatically with everything in your home, including lights, door locks, TV, thermostat, and motorized shades.

**Lighting**

**REV** smart home packages allow you to manage multiple lighting zones through your engraved keypad or dimmer switches provided in your base package. This flexibility helps you customize the lighting mood for parties, cozy evenings at home, or when you need to work and save energy by scheduling them off when you are away.

**Front Door Deadbolt**

Everyone needs to know that their property, possessions and loved ones remain safe from intruders. **REV** smart homes offer a front door deadbolt that is managed easily through your smart phone. With the push of a button, you will be able to leave your home with peace of mind, knowing you can lock your doors from anywhere at any time.

**Kitchen**

The kitchen is "command central" for most homes, and **REV** smart homes are no different. We place the 7" wall mounted tablet in the kitchen to allow easy access to anything in your home from one, centralized location.

**Manual and Motorized Shades**

Great design is beautiful to live with. Manual and motorized roller shades provide variable light control, insulate rooms against heat and cold while saving energy, protect your furnishings from damaging UV rays and even absorb sound, improving the room acoustics. Your **REV** smart home includes motorized shades in the living room and dining room areas. Manual shades are included as a standard in the bedrooms. All shades are a standardized bronze color to match your home throughout.

**Professional Installation and Training**

**REV** has partnered with Millennium Sounds and their experts to provide within our basic package professional installation of your family room TV and complimentary customized training on how to operate all the functionality in your **REV** smart home.

**Remote Control**

Each **REV** package includes a fully programmed remote control to ensure you are able to easily navigate your favorite shows, movies, and stream video with the simply touch of a button.

**Thermostat**

Not only are **REV** smart homes equipped with high-efficiency gas hydronic heating, but the Control4 programmable thermostat adds energy savings and conformability depending on the season to keep your home cool or warm. The thermostat can be accessed remotely, using your smart device, providing ease of use regardless of your location within the home or on vacation.

Interested in upgrading the Base Package? Contact Matt Reeve to set up an appointment at our Showroom at Keystone and customize your **REV** smart home to your liking!
